

## Strive for the diagnosis

Listen to the heart,  
Listen to the brain  
Consult the databases  
and investigate  
Work through the day  
At night, peep in the pubmed

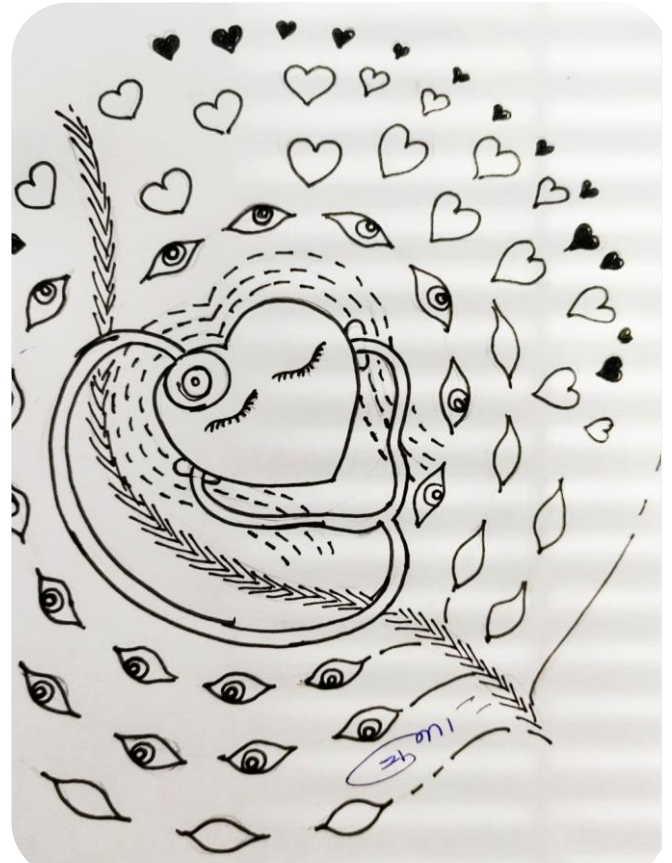

Discuss with the colleagues,  
May be a friend or foe  
Opinions [rarely] of boss  
& student be taken  
Finally 'sigh [sci-] of relief' may be  
in 'google' or 'hub'

Re-examine, deep phenotyping &  
Follow up may give the clue  
Listen to the patients and relatives too..  
The diagnosis may be hidden in their 'Ooh'

Listen to the brain,  
Your efforts will not go in vain

Listen to the heart and  
listen with the logic  
Diagnosis sometimes may do the magic  
Will avoid side effects tragic

Pursue with passion &  
Strive for the diagnosis..  
For the cure may be there..  
Today or tomorrow ...the cure may be there...

**Dr Shubha Phadke**  
**1st July 2020**  
**Doctor's day**
