

SGPGI & More.....

Memories galore, SGPGI & more

May be colleagues, teacher & patients whom we care

More is youth & youthfulness of years.

Struggle for chromosome banding which is over

- As now microarray has taken over.

To criticize & appreciate SSA is not here.

Struggle of a student of a new subject, was too much to bear

But was fruitful, like pains of labor

Evaluated student's aptitude & polished it more

Like SURF cleaning stains all over

Student Shubha became a teacher

Student in her remained student forever.

Did not leave alma-mater to go anywhere.

I grew, trees grew, we grew with SGPGI's honour

Did not realize how much we have hovered

For me, no ambition, no aims were there

Road was bumpy, but reached somewhere

As the subject chosen was dear

Learning, learning continued to be the life sphere

May it be gene, genome or patient care.

Exome – *Vexome* - did not bother

But true were the efforts.....those really matter

Destinations evolved as the journey progressed

I learned a gene in a year; new batches learn genome in 3 years

Liking the work & working for patients,

Made the job, 24 hours hobby for ever

Getting to teach & work for science,

What perk one wants more!

Intelligent & bright students surrounding, keeps the department beaming

Keeps myself on my toes & revolving

Resident with palazzo flashing & earrings dangling,

Keep me young & encourages me online shopping!
